and the controller configured to, when said distance does not fall short of said predefined distance value, determine a beamwidth according to a function which increases when the distance decreases, determine a set of allowed beam directions based on said beamwidth to comprise a plural number of allowed beam directions, said number decreasing when the beamwidth increases, and determine the optimum beam as a beam for which a reported quality is the highest according to a beam-tracking algorithm wherein, sequentially for each particular beam direction among said set of allowed beam directions, a burst is transmitted by a beam having said particular beam direction and said determined beamwidth and in response thereof a report including an indication of the quality of the beam is received from the further terminal."
